

Fox Solids-Conveying Eductors

...Conveying with No Moving Parts

**Fox Eductors + Blower
Convey Abrasive
Dust from Baghouses,
Dust Collectors**

Fox 4" Eductor is mounted directly beneath dust collector - with no valves, no airlock, no moving parts

Dust Collector

Eductor is driven with a 4 HP Rotron blower, supplied by Fox, and which requires no maintenance.

Fox eductor + blower systems have been mounted beneath dust collectors, baghouses, and cyclones since the 1960's. They convey fine powder from dust collectors with no blowback, no maintenance, and No Moving Parts. This system has been installed and operating in Mexico for more than 20 years.

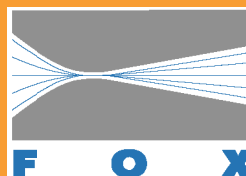

They have been used to convey hundreds of different types of dust - from activated carbon and adipic acid fines, to zincate and zirconium fines. Please contact us to see if our list of 4000 existing installations includes your powder. Call us at 973 - 328-1011.

To see specific examples, request these Case Studies:

Case Study #50 - Eductors convey food products from two dust collectors

Case Study #61 - Eductors convey foundry dust from (6) dust collector outlets

Case Study #50 - Eductors convey food products from two dust collectors
