Fox Eductors Convey Alternative Fuel at Cement Plants

Fox eductors have been used by the cement industry since the 1980's to convey waste and alternative fuels into cement kilns. The above 8" eductor installed in the USA conveys plastic waste for combustion in a cement kiln. Other alternative fuels conveyed by Fox eductors include pet coke, dried sludge pellets, chopped tires, plastic film, sawdust, agricultural waste (rice husks, crushed oilseeds, peanut shells, ground corn cobs), shredded carpet, oil filter fluff, etc.

To check if our list of 4000 existing installations includes your material - please call Fox at 973-328-1011.

To see specific examples, request these Case Studies:

Case Study #74- Alternative fuels to cement kilns

Case Study #77- Dried sludge into cement kilns

Case Study #88- Chopped tires into cement kilns
